Performance Testing

PocketSmart AI – Smart Budget and Recommendation AI

Valliammal College for Women | Department of BCA

Priya (Team Leader), Saira Banu, Harinishree, Pooja Shree, Lavanya

Test approach

The team tested the local application by running the Flask server and checking major pages, planner requests, generated results and common input flows.

Observed checks

• Application starts successfully

• Planner pages load

• Requests reach the backend

• AI-generated result is returned when the service is available

• Result pages render correctly

• Invalid or unavailable AI responses are handled without exposing secrets

Environment

Testing was performed in the local Windows development environment. External AI response time can vary because it depends on the configured AI service.
